Methods and properties that don't access instance data should be static
 Code Smell
New-style classes should be used
 Code Smell
Parentheses should not be used after certain keywords
 Code Smell
Track "TODO" and "FIXME" comments that do not contain a reference to a person
 Code Smell
Module names should comply with a naming convention

"__exit__" should accept type, value, and traceback arguments

Analyze your code

 Bug

 Blocker

The `__exit__` method is invoked with four arguments: `self`, `type`, `value` and `traceback`. Leave one of these out of the method declaration and the result will be a `TypeError` at runtime.

Noncompliant Code Example

```
class MyClass:
    def __enter__(self):
        pass
    def __exit__(self, exc_type, exc_val): # Noncompliant
        pass
```

Deprecated

This rule is deprecated; use `{rule:python:S5722}` instead.
