Search by name... 

Functions should not have too many lines of code	
Track uses of "NOSONAR" comments	
Track comments matching a regular expression	
Statements should be on separate lines	
Functions should not contain too many return statements	
Files should not have too many lines of code	
Lines should not be too long	
Methods and properties that don't access instance data should be static	
New-style classes should be used	
Parentheses should not be used after certain keywords	
Track "TODO" and "FIXME" comments that do not contain a reference to a person	
Module names should comply with a naming convention	

Track uses of "FIXME" tags

Analyze your code

 Code Smell

 Major 

 cwe

FIXME tags are commonly used to mark places where a bug is suspected, but which the developer wants to deal with later.

Sometimes the developer will not have the time or will simply forget to get back to that tag.

This rule is meant to track those tags and to ensure that they do not go unnoticed.

Noncompliant Code Example

```
def divide(numerator, denominator):  
    return numerator / denominator           # FIXME d
```
