# Knowledge check

2 minutes

1. What keyword tells Django there's a relationship between two classes?

○   `schema`

○   `INSTALLED_APPS`

◉   `ForeignKey`                                                          ✓

  **Correct. This keyword lets Django know there's a relationship
  between two classes.**

2. What Django command is the same as the `INSERT` statement in SQL?

○   `Question.objects.all()`

◉   `save`                                                                ✓

  **Correct. This Django command is the same as the `INSERT` statement
  in SQL.**

○   `q.question_text`

3. What command should you use to update the database schema?

○   `makemigrations`

○   `sqlmigrate`

◉   `migrate`                                                             ✓

  **Correct. The `migrate` command updates the database.**
